TABLE OF CONTENTS

01

Biophilic Design

Integrating nature into the built environment

02

Net-Zero Materials

Carbon-neutral building components and methods

03

Adaptive Reuse

Transforming existing structures for new purposes

04

Smart Building Systems

AI-driven energy management and automation

05

Community & Wellbeing

Designing for human health and social connection

Building a
greener world,
by design.

Five principles guiding our practice

Biophilic Design

Integrating nature into the built environment
to enhance human wellbeing and ecological health.

Designing with Nature, Not Against It

Biophilic design is the practice of connecting building occupants more closely to nature. Rooted in the understanding that humans possess an innate tendency to seek connections with nature, it incorporates natural materials, natural light, vegetation, and other elements of the natural world into the modern built environment.

At Arcadia, we apply three core biophilic strategies across every project: direct nature experiences (living walls, water features, natural ventilation), indirect nature references (natural materials, organic patterns, earth tones), and spatial conditions inspired by nature (prospect and refuge, mystery and enticement).

Buildings Should Breathe

Living architecture responds to its environment, regulates its own climate, and enhances the health of its occupants.

62%

Improvement in Air Quality

Buildings with natural ventilation systems show a 62% improvement in indoor air quality metrics compared to sealed HVAC-only environments.

3.4×

Higher Occupant Satisfaction

Biophilic offices report 3.4 times higher occupant satisfaction scores in post-occupancy evaluations.

28%

Reduction in Absenteeism

Workplaces incorporating biophilic design principles see a 28% decrease in unplanned employee absences.

Our Impact in Numbers

40%

Energy Reduction

Average decrease in energy consumption across our net-zero projects

12K

Tons CO₂ Offset

Carbon offset through green building materials and design in 2025

94%

LEED Certification

Of Arcadia projects achieve LEED Gold or Platinum certification

FEATURED PROJECT

The Greenweave Pavilion

Singapore — Completed 2025

A 12-storey mixed-use tower featuring integrated living walls on all four facades, generating 40% more energy than it consumes through embedded photovoltaic facades and vertical wind corridors. The Greenweave Pavilion has become a benchmark for tropical sustainable architecture.

140%

Net energy positive

2,400m²

Living wall coverage

LEED Pt.

Platinum certified

Sustainability Milestones

2019

Foundation

Arcadia founded with a mandate for carbon-neutral design

2021

First Net-Zero Project

Completed the Helios Office Tower — our first net-zero commercial building

2023

Living Materials Lab

Opened our in-house research lab for bio-based building materials

2025

Greenweave Pavilion

Flagship project generates 140% of its own energy consumption

2027

Carbon-Positive Portfolio

All new projects designed to be carbon-positive from day one

The Team Behind the Vision

Daniel Vasequez

Director of Design

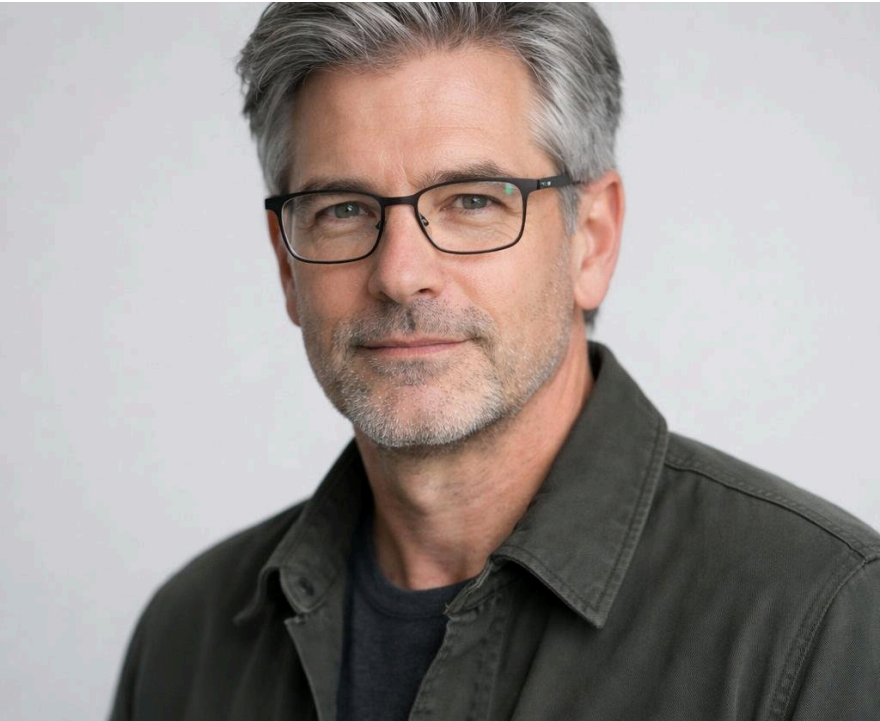

Former lead at Meridian Partners, specializing in adaptive reuse and urban regeneration.

Ingrid Solberg

Head of Sustainability

Environmental engineer with 15 years in carbon-neutral building systems.

Robert Chen

Principal Architect

Co-founder and lead architect, pioneering biophilic design since 2012.

Maria Rodriguez

Lead Architect, Helios Practice

Template: Testimonial / Quote

"Sustainable architecture isn't about sacrifice — it's about reimagining what's possible when we design with nature, not against it."

Working across three continents, Rodriguez has pioneered the integration of living systems into commercial architecture. Her latest project, the Greenweave Tower in Singapore, generates 40% more energy than it consumes through embedded photovoltaic facades and vertical wind corridors.

Let's Build the Future Together

We're always looking for partners, collaborators, and communities who share our vision for a sustainable built environment.
