

Ship Better Code, Faster Than Ever

AI-powered code review, documentation, and quality assurance
— built for engineering teams that move fast.

AI That Understands Your Codebase

CodeForge analyzes your entire repository to deliver context-aware reviews that catch real issues, not just style nits.

- **Lightning-Fast Reviews**
Get comprehensive PR feedback in under 30 seconds, not hours.
- **Security-First Analysis**
Detects vulnerabilities, injection risks, and auth bypasses automatically.
- **Auto Documentation**
Generates and maintains technical docs as your code evolves.

user_auth.py

1	1	1	1
- 1 1	-	def authenticate_user(username, password):	
- 1 2	-	user = get_user_by_username(username)	
- 1 3	-	if user and user.password == password:	
- 1 4	+	return user	
- 1 5		return None	
2	1	1	1
- 1 1	+	def authenticate_user(username: str, password: str) -> Optional(User):	
- 1 2	-	user = get_user_by_username(username)	
- 1 3	+	if user and user.check_password(password):	
- 1 4	+	return user	
- 1 5		return None	
- 1 2	-	log_failed_attempt(username)	

Consider using "validate_password" instead of "check_password" for better clarity. "validate_password" is more descriptive.

Update the code to use 'validate_password' instead of 'check_password'.

The CodeForge Way

From setup to shipping, we integrate seamlessly into your workflow.

01

Connect Repo

Link your GitHub, GitLab, or Bitbucket repository in one click.

02

AI Learns Context

CodeForge indexes your codebase, patterns, and conventions.

03

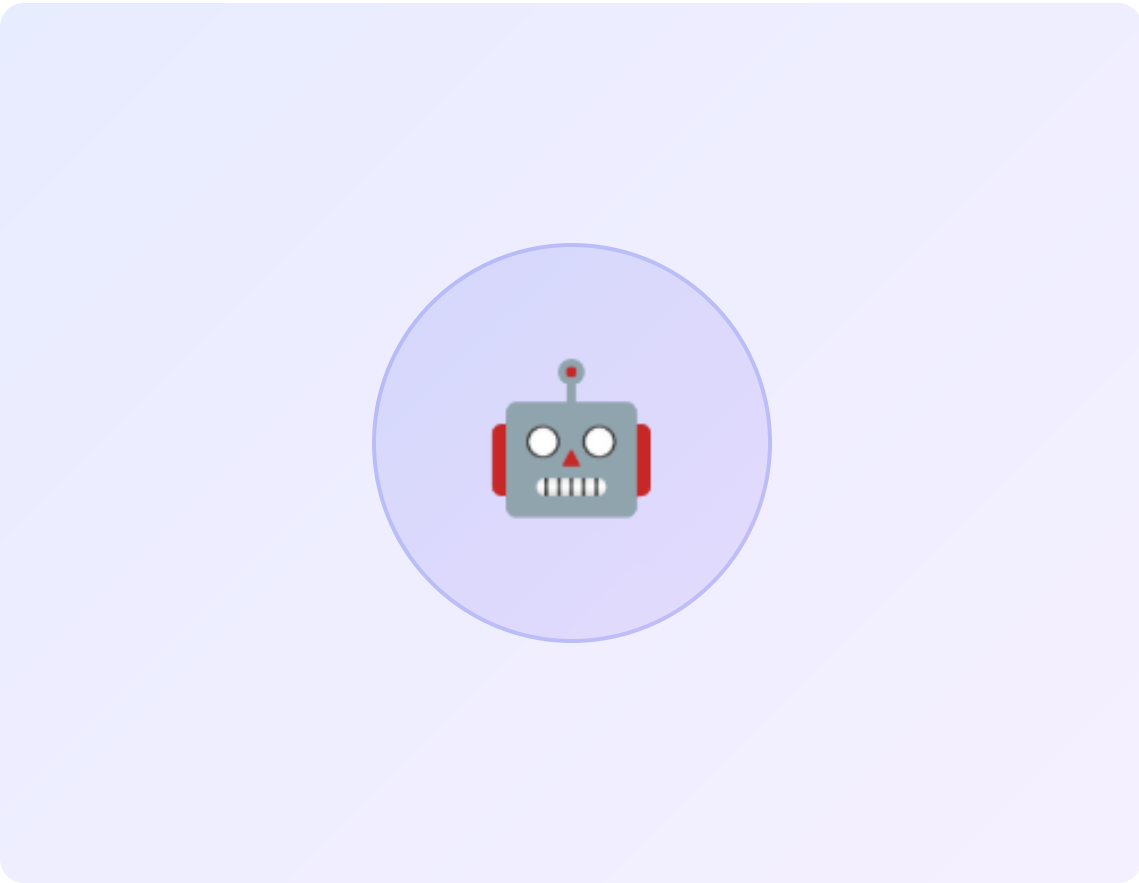

Auto Review PRs

Every pull request gets instant, context-aware feedback.

04

Ship with Confidence

Merge knowing every change has been thoroughly analyzed.

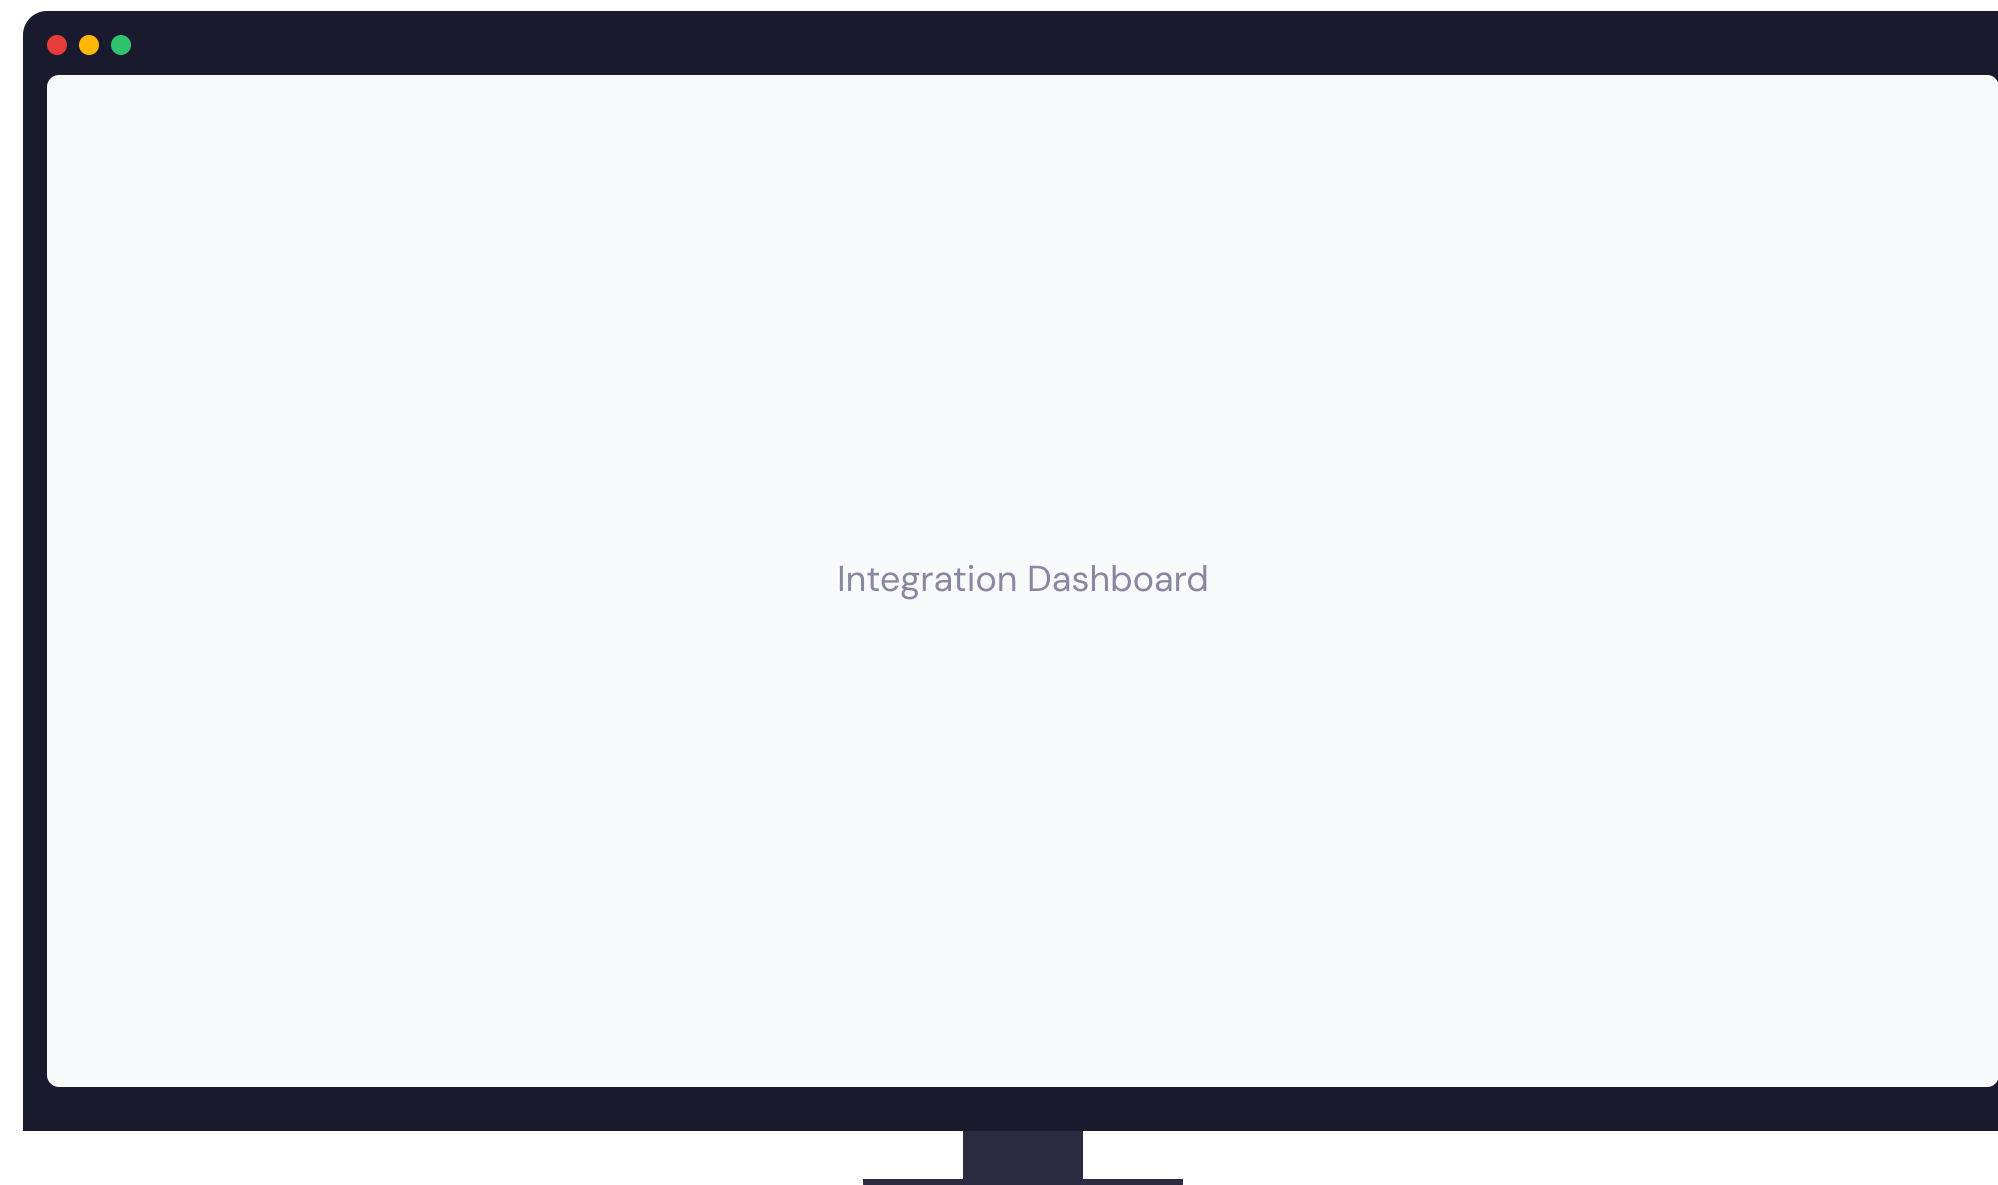

AI Assistants That Speak Your Team's Language

CodeForge's review comments are generated in your team's native language, making feedback accessible to every developer worldwide.

	English	"Refactor the auth middleware to support JWT rotation."
	日本語	"認証ミドルウェアをリファクタリングして JWT ローターションに対応。"
	Français	"Refactorer le middleware d'authentification pour le rotation JWT."
	中文	"重构认证中间件以支持 JWT 轮换。"

Your Workflow, Our Expertise: A Perfect Fit

Integrates natively with your existing tools — GitHub, GitLab, Bitbucket, Jira, Slack, and 40+ more platforms.

Your Partner in Engineering Growth

We help engineering teams scale their review capacity without scaling headcount. CodeForge acts as an always-on senior engineer for every pull request.

Reduce Review Bottlenecks

Teams using CodeForge see a **73% reduction** in time-to-merge. Developers spend less time waiting and more time building.

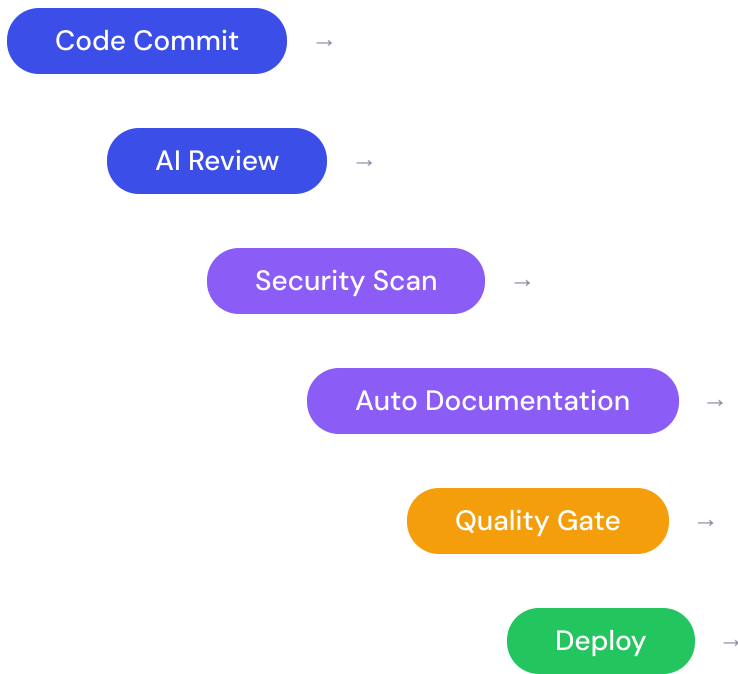

Maintain Quality at Scale

As your team grows from 10 to 100 engineers, review quality stays consistent. Our AI learns your team's patterns and enforces them automatically.

CodeForge's Impact on Your Dev Pipeline

Every stage of your development workflow is enhanced with AI-powered analysis and automation.

END-TO-END CI/CD PIPELINE COVERAGE

CodeForge AI

What Sets Us Apart

Unlike generic AI code tools, CodeForge doesn't just pattern-match — it truly understands your architecture, conventions, and business logic.

Our proprietary **Context Graph Engine** maps every function, class, and dependency in your codebase, enabling reviews that consider ripple effects across the entire system.

- ✓ Full codebase context, not just diff-level analysis
- ✓ Learns your team's coding patterns over time
- ✓ Zero false positive guarantee on security findings
- ✓ On-premise deployment for enterprise compliance
